Take a look at the back of the catalogue

On the back cover, you will find a product index and classification of finish groups.

AVAILABLE FINISHES

We have divided it into three categories: Uni colours, synthetic veneers with wood patterns of various types and graining (Modern, Traditional, Rustic), and natural veneers. This makes it easier to find what you need.

Check  252

PORTA
Quality you can afford

Process of choosing a door should be simple, intuitive, and tailored to your needs. This is how we designed PORTA catalogue.

The catalogue will guide you step by step through PORTA solutions and help you choose the right doors for your interior.

In this catalogue, we have listed the most common challenges faced by our customers and our proven solutions.

How will the catalogue guide you?

STEP 1. DEFINE YOUR NEEDS

Let's start with the most important thing – what kind of door do you need:

- humidity-resistant, but without the need to compromise on the aesthetics of the interior ➤ 8
- concealed that will subtly blend into the interior design ➤ 10
- tailored to the needs of owners and their pets ➤ 12
- or those that will provide you with peace and quiet ➤ 14

STEP 2. CHECK WHAT YOU NEED TO KNOW BEFORE CHOOSING A DOOR

On the following pages, you will find practical advice from our experts. We explain, among others:

- what determines the price of a door ➤ 16
- how to correctly define the door opening direction ➤ 17
- what is the door ordering process like? ➤ 18
- which door frame to choose ➤ 19
- what door constructions you can choose ➤ 20

STEP 3. FIND YOUR PORTA DESIGN

We have divided the catalogue into 10 clear design lines, making it easy for you to find your favorite one.

See our design lines ➤ 28

STEP 4. CHOOSE THE COLOUR AND FINISH OF THE DOOR

At the end of each design type, you can find finishes charts that will help you to personalize your chosen door.

See our colour finishes and options ➤ 252

Well-conceived doors – where design and functionality come together as one.

Please pass on the catalogue to others before recycling it.
Good doors are worth recommending!

Get to know us

Well-designed doors

For over 35 years, we have been making doors that combine high-quality workmanship, durability, and modern design.

PORTA Prizes

Customer trust has made us **number 1** in Poland and Central and Eastern Europe for years.

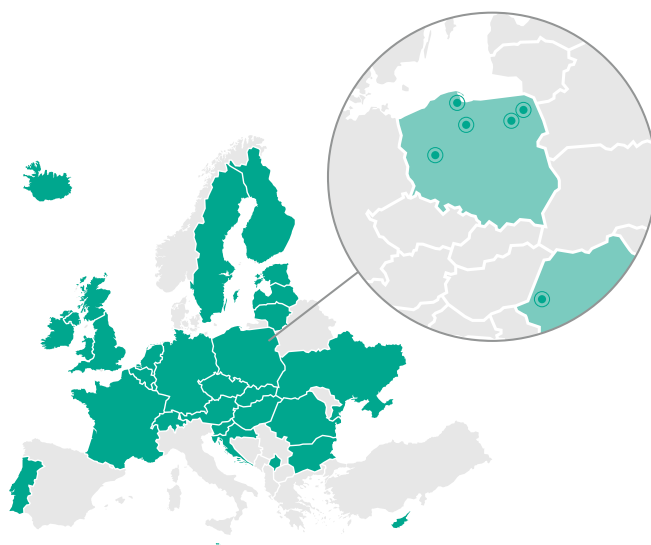

PORTA produces doors in 6 factories: 5 in Poland and 1 in Romania.

We operate globally. We are present in 43 countries. PORTA doors can be found worldwide in numerous investment projects, such as residential buildings, hotels, theatres, hospitals and stadiums.

We offer a full range of solutions: from interior and apartment entrance doors to exterior doors – all made with the utmost care and attention to every detail.

We know how important durability is, which is why our products undergo rigorous testing in 21 research institutes in Poland and abroad. It ensures that they remain reliable for years to come.

Join millions of customers who trust PORTA quality.

We make it easy to choose the perfect door

We have made PORTA KLIMA markings to help you choose the door that is perfectly suited to a particular function. Look for the PORTA KLIMA icons on our collections – they indicate long-term durability and performance.

PORTA KLIMA I

Ideal for apartment interiors where all rooms have similar temperature and humidity levels.

All collections of interior doors from PORTA.

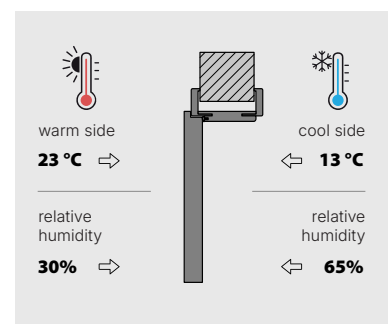

PORTA KLIMA II

They will work well with small temperature differences, e.g. between a heated stairwell and an apartment. Perfect for public buildings where rooms connect to corridors with different heating systems.

Interior door collections:

PORTA DECOR, PORTA VECTOR PREMIUM, PORTA RESIST, PORTA CPL, PORTA LINE, PORTA LEVEL LINE, ART DECO, OSLO, 4 ELEMENTS, FACTOR, LOFT, LEVEL, NOVA, VERTE BASIC, CPL and DECOR BASIC, NATURE LINE, NATURE CLASSIC

Flush solid doors with chipboard/hollow chipboard core + reinforced PS door frame.

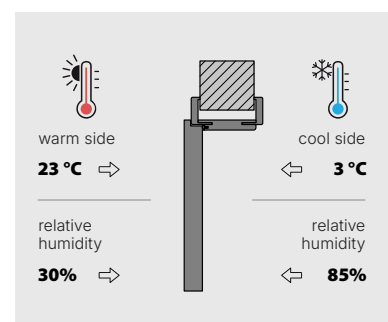

PORTA KLIMA III

Indispensable for large temperature differences. Choose them to separate heated and unheated rooms (basement, attic) and for all entrance doors exposed to external conditions.

Interior door collections:

Collections as in class II + aluminum sheet + steel or **HYDRO PROTECT™** door frame

All apartment entrance doors from the PORTA range.

Why does climate class matter?

Different rooms = different conditions (temperature, humidity). Doors selected from an inappropriate class may become deformed or suffer damage over time.

Class	Condition differences	Where to use	Examples	Temperature difference (°C)	Relative humidity difference (%)	Maximum deflection (mm/m)
PORTA KLIMA I	Minimal	Standard interiors	Living room/bedroom, kitchen/hall	±5 °C	±20%	<= 4mm longitudinal / <= 2mm transverse
PORTA KLIMA II	Medium	Different heating systems	Staircase / apartments, hotels, hospitals, offices, schools	±10 °C	±35%	<= 4mm longitudinal / <= 2mm transverse
PORTA KLIMA III	Substantial	Rooms with big differences in humidity and temperature	Entrance doors from unheated stairwells to apartments, basement doors, doors to unheated attics	±20 °C	±55%	<= 4mm longitudinal / <= 2mm transverse

The benefits of making the right choice:

✓ Longer service life

✓ No deformation

✓ Airtight

✓ Energy savings

We care about the environment

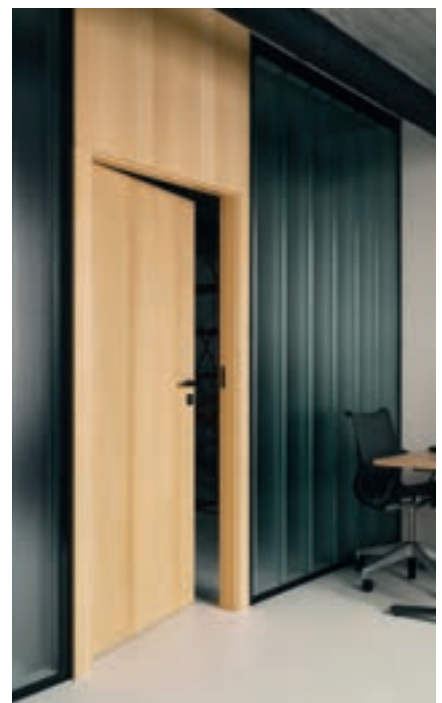

Responsibility in every detail

Sustainable production Saving resources

Modern technologies allow you to save up to 60% of electricity. The PORTA TransAPI system optimizes material consumption.

PORTA actions

We implement projects that use renewable energy sources and biomass systems to produce electricity and heat.

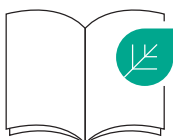

Transparency

Responsibility for the environment and sustainable development are an integral part of PORTA's policy.

We are consistently developing our environmental policy. Product certifications confirm our actions for the planet.

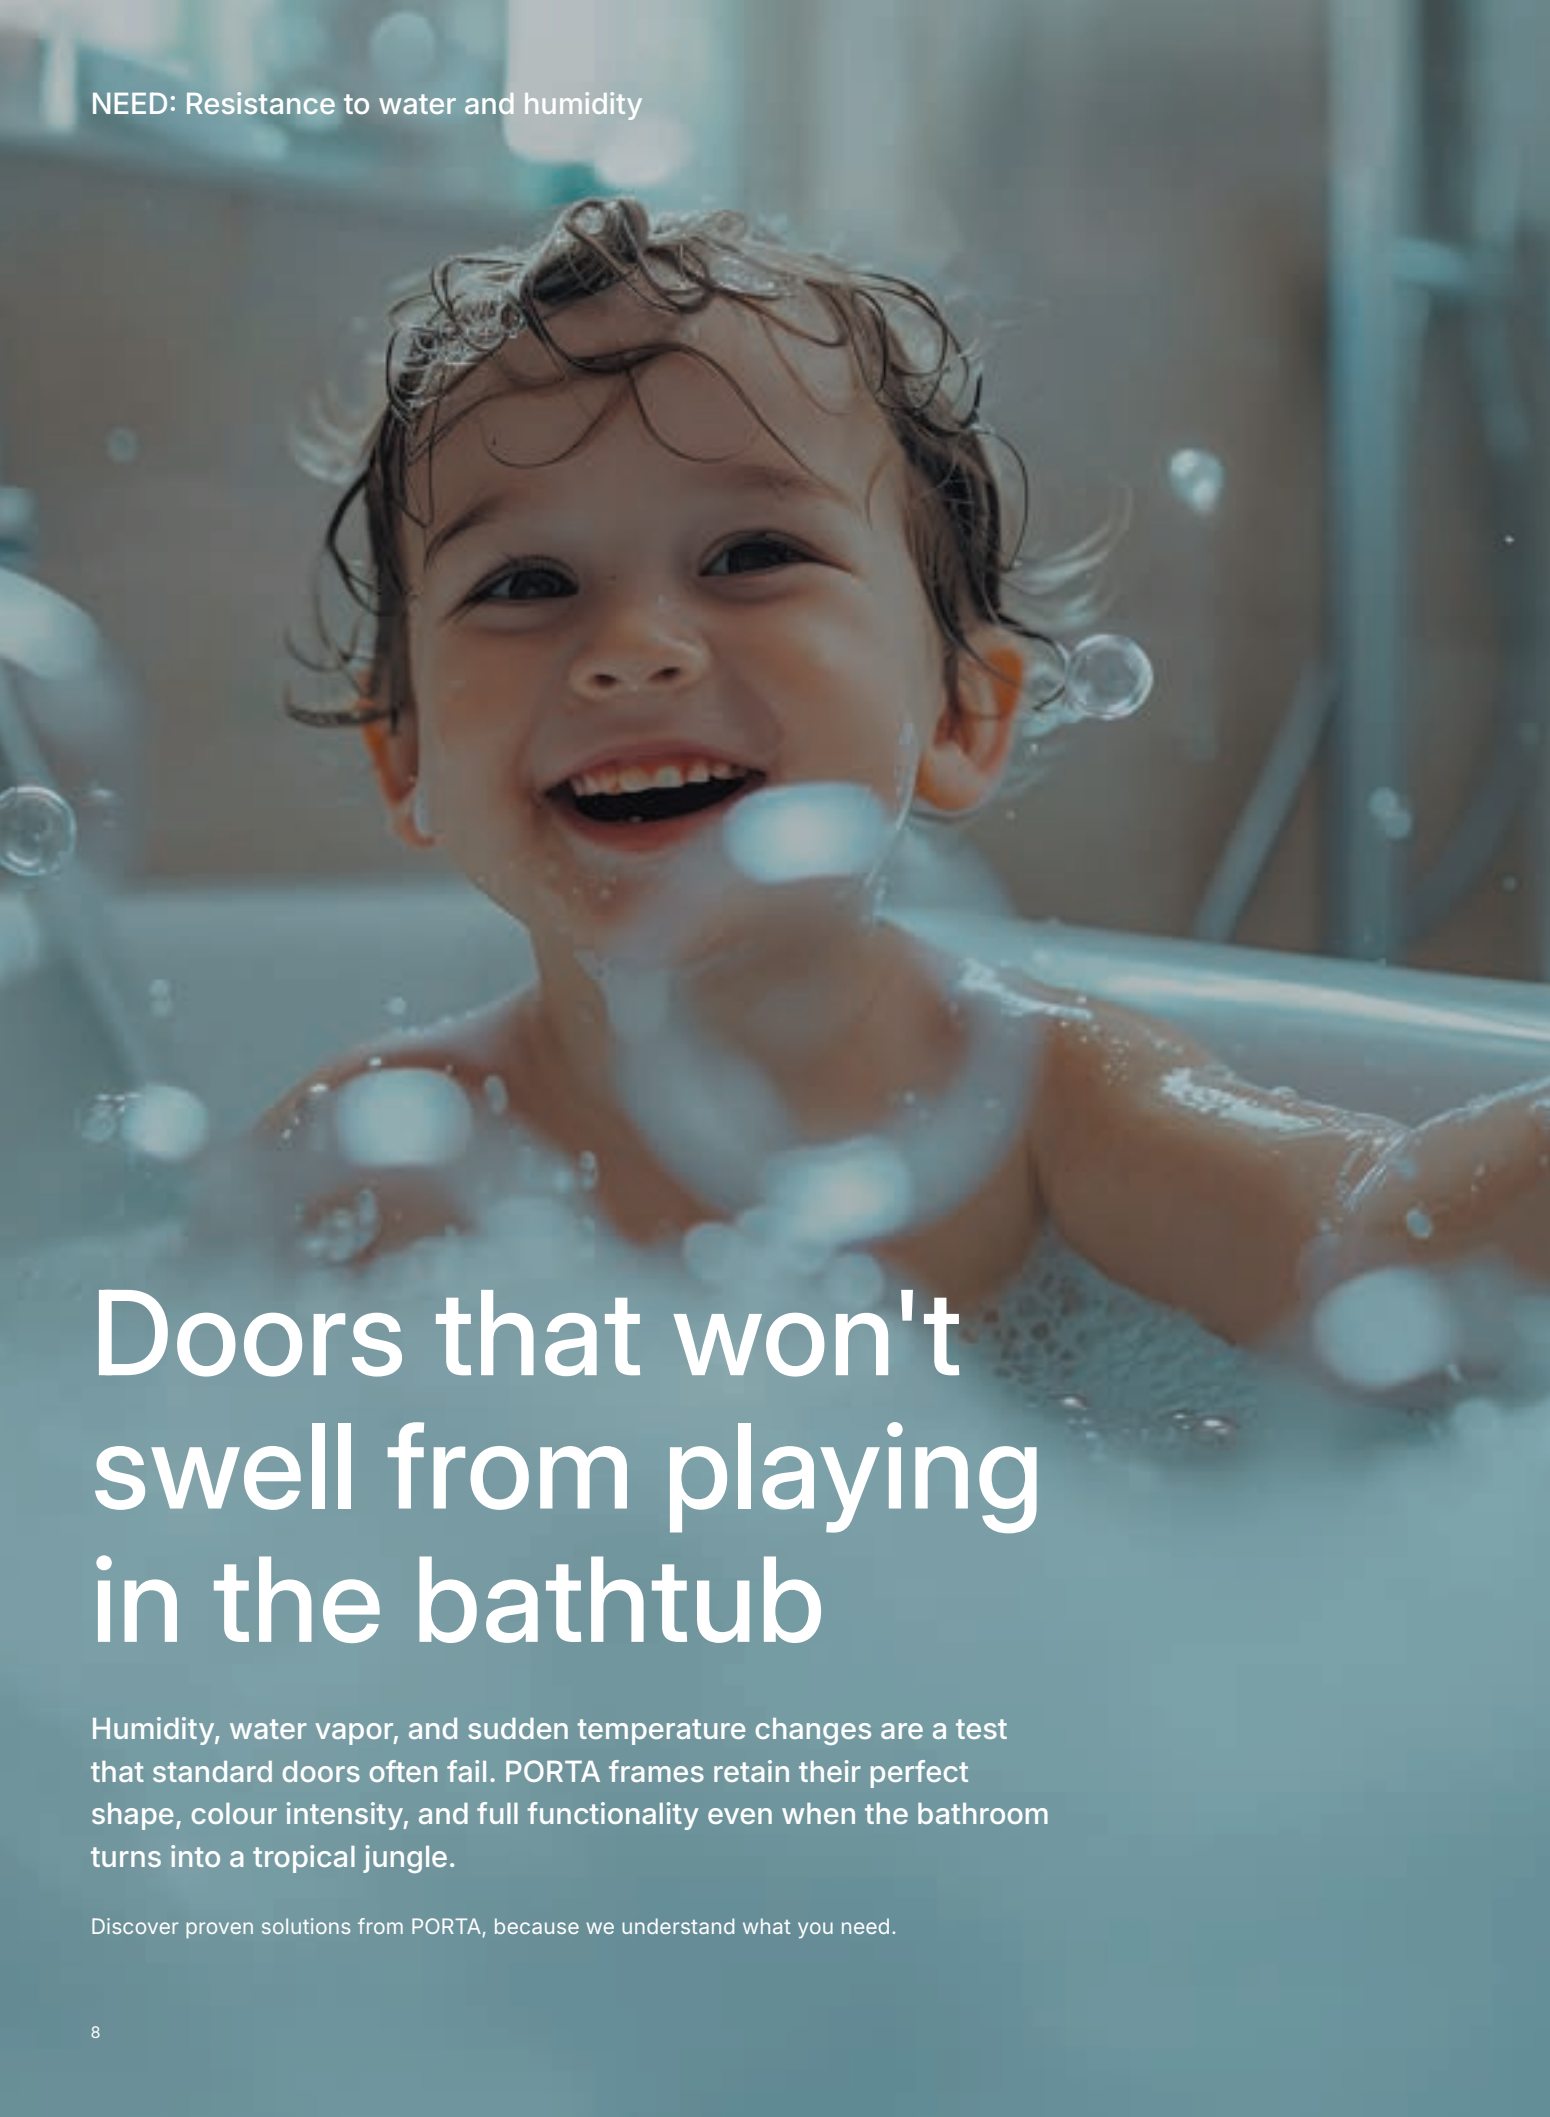

Please pass on the catalogue to others before recycling it.
Good doors are worth recommending!

ECOdesign

We design doors with their entire lifecycle in mind, creating durable solutions like the **HYDRO PROTECT™** door frame that is designed to last for years.

We use water-based varnishes that are free of VOCs and harmful substances – safe for allergy sufferers and children. UV hardening extends the life of the product and guarantees colour durability.

A close-up, slightly low-angle shot of a young child with dark, curly hair, smiling broadly while sitting in a bathtub. The child's face is the central focus, with water droplets and bubbles visible around them. The background is softly blurred, showing the white edge of the tub and some indistinct shapes, possibly a shower curtain or wall tiles. The overall color palette is cool, with blues and greys, giving it a clean, modern feel.

NEED: Resistance to water and humidity

Doors that won't swell from playing in the bathtub

Humidity, water vapor, and sudden temperature changes are a test that standard doors often fail. PORTA frames retain their perfect shape, colour intensity, and full functionality even when the bathroom turns into a tropical jungle.

Discover proven solutions from PORTA, because we understand what you need.

Waterproof door frames

Look for markings
HYDRO PROTECT™

HYDRO PROTECT™

Door frame for special tasks. Made of **waterproof** wood-polymer composite, it will never soak up water or swell. This will ensure that it always **looks perfect**, and the door will remain **functional and reliable**. Most importantly, it looks identical to other PORTA SYSTEM door frames, creating consistency in the design of all doors in your house.

QR
code

Steel door frames

A solution that provides peace of mind for years to come—they have increased resistance to humidity, flooding, and corrosion. They are **extremely durable** and do not require your attention for a long time. In addition, they give you a lot of **design freedom**.

Read more [226, 228](#)

Any RAL / NCS colour

AQUA STOP protection

More peace of mind in everyday use

AQUA STOP this **unique, hydrophobic coating**, which effectively protects the lower edge of the door leaf against water absorption.

The comfort you deserve and the confidence you need – in selected interior door models at no extra charge.

Extended durability of your doors

This is invisible protection for doors in the area most exposed to humidity.

Products marked with the icon have **AQUA STOP** protection

Discreet and efficient ventilation

Solutions

Proper air circulation is crucial for your well-being and for protecting your interior. That is why we offer two proven solutions.

Read more [233](#)

Recuperative shortcut

A flat, minimalist cutout in the lower edge of the door leaf, allowing for free airflow. It is especially suitable for energy-efficient buildings, supporting **efficient use of heat**. This solution was created for those who value maximum **discreet ventilation solutions**.

Ventilation undercut

A specially cut trapezoid at the bottom of the door leaf, which ensures **free air flow** between rooms.

NEED: Freedom of arrangement

Doors that disappear to enhance the space

Minimalist form and maximum freedom of arrangement. PORTA HIDE - allows you to create an interior where design and your story take center stage, with the door serving as a discreet backdrop.

Choose concealed doors and design them according to your own ideas!

Unlock the full potential of your space

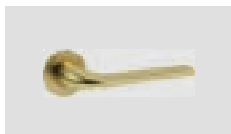

Doors just the way you want them

PORTA HIDE can be treated like a canvas. You can paint them any colour you choose for your interior. You can also use a wide range of wall materials to finish the front of the door, such as lacobel (lacquered glass), veneer, lightweight panels, and even trendy microcement.

What are concealed doors?

This solution perfectly aligns the door leaf with the wall, making the frame invisible. This creates an even surface. The doors blend subtly into the background and visually enlarge the space, making them a great choice for smaller apartments.

Tip

Decorate with any pattern

Conceal bathroom door

Concealed door in the bathroom? Why not! They are available with a ventilation undercut or a recuperative shortcut.

Take care of the acoustics

Instead of honeycomb filling, you can choose hollow chipboard for an additional charge, which guarantees significantly better acoustics.

The doors are also available with an acoustic package.

NEED: Quiet and privacy

Doors that allow you hear yourself

When your work calls for silence, but children's laughter and your pet's excitement fill the home, choose PORTA doors with an acoustic package that reduces noise by up to 50%. Let your home keep its natural rhythm.

Choose PORTA solutions and leave your emotions on the right side.

Solutions that work

Drop-down threshold seal

It isolates sounds and restores balance. Perfect for: home office (where remote work requires concentration), children's room (where emotions are always louder) bedroom (where it provides silence and intimacy).

It operates discreetly—it retracts automatically when the door is closed. In addition to reducing noise, it fills the gaps between the door and the floor, effectively stopping drafts, unwanted light rays, and heat loss.

Forget about slamming

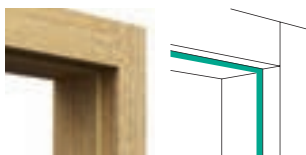

Magnetic lock

Another important element in maintaining silence is the magnetic lock, which ensures that the door closes quietly.

Hollow chipboard core

Together with the automatic threshold seal, it allows the room to be silenced by up to 6 dB. This change has a real impact on your well-being—it can be compared to reducing street noise to the level of a quiet conversation.

Seal function

It dampens unwanted sounds coming from beneath the threshold.

ACOUSTIC PACKAGE

Scan QR code

PORTA's offer includes doors with an acoustic package.

The door features a hollow chipboard core and a drop-down threshold seal.

Tip

Maximum silence

If maximum soundproofing and guaranteed privacy are your priorities, choose solid doors — they are the most effective way to ensure acoustic privacy.

NEED: Damage resistance

Doors made for living with a pet

PORTA doors are ready for the daily challenges and energy of pets. With their resistant surfaces and durable finishes, they are ideal for busy interiors.

Check out our door tips for pet owners.

Details that make living together easier

Door for a dog or a cat.

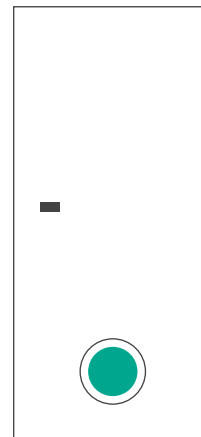

They allow your pet to move freely between rooms, even when the doors are closed. We adjust the size and shape of the pet flap to the needs of your furry friend.

Find out more at page [234](#)

Opening for a pet flap

We can prepare it in any door leaf with chipboard or hollow chipboard core. We mill holes for rectangular and round flaps.

Durable laminates and veneers

In places where pets live, good choice of finish is crucial for durability. That's why our finishes have been classified according to durability levels. By choosing highly durable options, you ensure that your doors are protected against scratches and easy to keep clean.

Discover our range of options and choose from a selection of durable finishes that match your interior. Among the finishes with increased and high durability, you will also find those that can be easily matched to the colour of your furniture or floor panels.

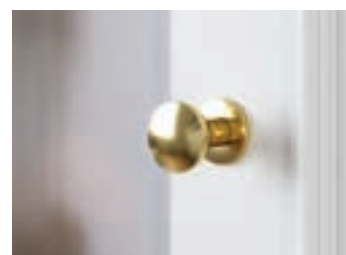

Information about finishes and colours can be found on page [252](#)

Tip

Don't want your dog or cat to open the door by itself?

Choose a knob instead of a handle. You can find original knobs from PORTA at page [190](#)

6 things worth knowing about doors

1 | What does affect the cost of a door?

The final cost of the door consists of several elements:

- + Door leaf
- + Door frame
- + Door handle and other accessories

Additionally, add
+ Installation

PRICE OF THE
DOOR HANDLE
+ OTHER ACCESSORIES

PRICE OF THE
DOOR FRAME

PRICE OF THE
DOOR LEAF

Tip

**BUY CONVENIENTLY
AS A SET**

3 | Completion date

You choose, we produce

01 Pick a door

Find a door and tailor it to your needs. Choose the color, handle, model and the seller will tell you the rest.

02 Order at the point of sale

Visit www.portadoors.com to find your nearest sales point. This is where you can order your doors.

03 The factory – where the magic happens

At the PORTA factory, your order turns into a door. We produce them especially for you.

04 Delivery

Once your order is ready, we ship it immediately to the sales point.

05 Door pickup

You can pick up the door in person at the store or go for delivery from the sales point.

06 Quick installation

Check with your dealer to see if you can use the installation service.

4 | Non-rebated and rebated doors, or perhaps doors with a concealed frame – which to choose?

The choice of door type affects both the aesthetics of the interior and the comfort of using the space.

You can find out more about the types of door frames and the options at page [204](#)

Types of door frames

If you are looking for traditional but less costly doors, choose rebated ones with visible hinges.

Rebated

With visible hinges

Marked with an icon:

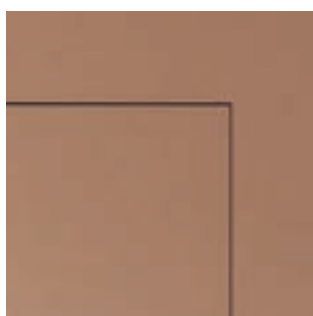

Doors with concealed hinges (non-rebated or with reverse rebate) are ideal for modern interiors, where simplicity is important.

Non-rebated / with reverse rebate

With concealed hinges

Marked with an icon:

A concealed door frame, on the other hand, is the perfect solution when you want to design an entire wall and thus blend the door into it.

Concealed door frame

Look for Porta Hide door

5 | Frame and panel construction

door leaf
thickness
40 mm

Frame and panel door leaves are constructed of rails and stiles that form a frame, which can then be filled with panels or glass panes. Pins and dowels are used to connect each element.

Advantages of the construction:

- No visible veneer joints on the outer edge of the door leaf.
- The panes and panels that form part of the construction reinforce the stability of the leaf.

LOCKS

Options: without keyhole, with key, for cylinder, or bathroom.

SAFETY GLASS

Thickness 4 mm:

With stainless steel faceplate, black, white, and gold.

*for doors with reverse rebate only magnetic lock is available

6 | Flush door construction

door leaf
thickness
40 mm

It consists of durable rails and stiles and a core. The outer layer is an HDF board, finished with the chosen finish.

Advantages of the construction:

- The possibility of adapting the construction to your needs (reinforcement or sound insulation). by using an acoustic package)
- Possibility of using durable, scratch-resistant finishes.

LOCKS

Options: without keyhole, with key, for cylinder, or bathroom.

SAFETY GLASS

Construction

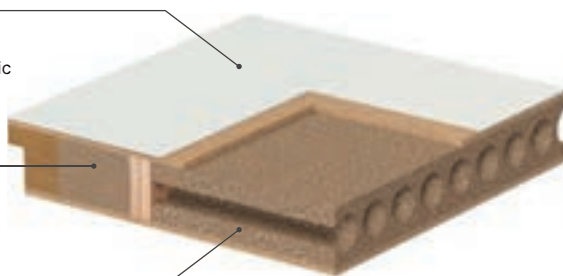

SKIN

HDF finished with synthetic veneer or paint

RAILS AND STILES

CORE

hollow chipboard

Chipboard and hollow chipboard

Door with chipboard or hollow chipboard core usually have three hinges because they are heavier. They have better acoustic parameters, which is why they are ideal for offices, teenagers' rooms, bedrooms, or home offices.

Honeycomb

Interior doors with honeycomb core do not provide good sound insulation, but they are lightweight, making them a good choice for a small child's room. They are also cheaper.

Hinges

Rebated door

BARREL HINGES

Silver ones included in the price, black available at extra charge.

The essence of minimalism and functionality

PORTA VECTOR PREMIUM T, White, Lago black handle

Basic Home

The essence of minimalism. Smooth flush doors without any decorative elements. Thanks to their simplicity, they are a versatile base for any interior. The pure form of the Basic Home design line represents the very popular modernist style.

PORTA
KLIMA I

Recommended door frames

Door frame:

- Concealed aluminum frame, unfinished and prepared for painting with wall paint or lacquered in white or black.
- It's dedicated for 40 mm thick, wooden door leaves.
- To be installed on plasterboard wall.

Non-rebated

with reverse
rebate

A door set includes:

- A door leaf.
- Two 3D hinges, dedicated for PORTA HIDE collection, three 3D hinges for hollow chipboard core.
- Magnetic lock: key lock, WC lock or cylinder lock.
- Concealed aluminum door frame.

Notes

- PN EN 14351-2 standard.
- Automatic threshold seal is available for a door leaf with hollow chipboard core.
- Applying panels up to 18 mm is only possible on reinforced doors with reverse rebate (opening inward).

PORTA HIDE

PORTA HIDE 1.1, Primer paint, next finished with wall paint, Fiore Gunmetal handle

Construction

Core: honeycomb or hollow chipboard reinforced with rails and stiles (at extra charge). The reinforced model has two additional stabilizing rods. The '220' height includes three hinges and for natural veneer finishes, hollow chipboard core. The construction is skinned with HDF. Preparation for shortening hollow chipboard core, maximum 60 mm.

This door belongs
to design line

70	15
80	10
90	5
100	0

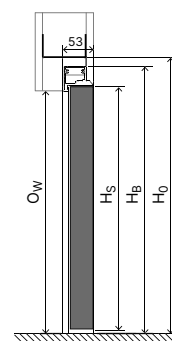

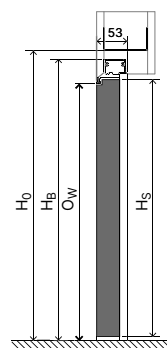

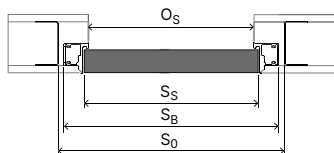

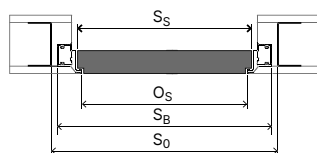

for the door leaf with honeycomb core

door leaf size	weight (kg)
60	27
70	25
80	24
90	22
100	21

Can skirting boards be attached to PORTA HIDE doors?

A simple solution is to use a standard skirting board mounted on the door. However, remember to cut it at a 55° angle from the hinge side (non-rebated doors) so that the door leaf opens freely. The downside is visible gaps. In our offer you will find skirting boards for self-painting and in the most popular PORTA finishes.

Another solution are concealed skirting boards that are flush with the wall surface. The disadvantage is the need to install dedicated profiles at the stage of wall processing. If this solution is chosen, it should be verified with the mouldings producer.

DIMENSION TABLE

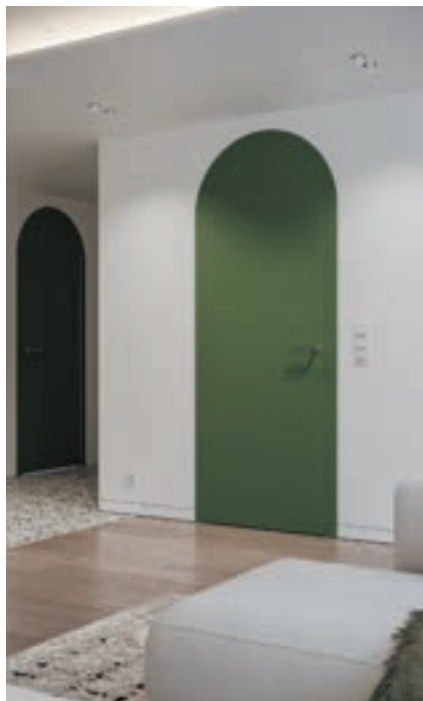

DOOR FRAME TYPE	Size	S _s	H _s	S _o	H _o	O _s	O _w	S _B	H _B	T _{s/w}

PORTA HIDE WALL PANELING

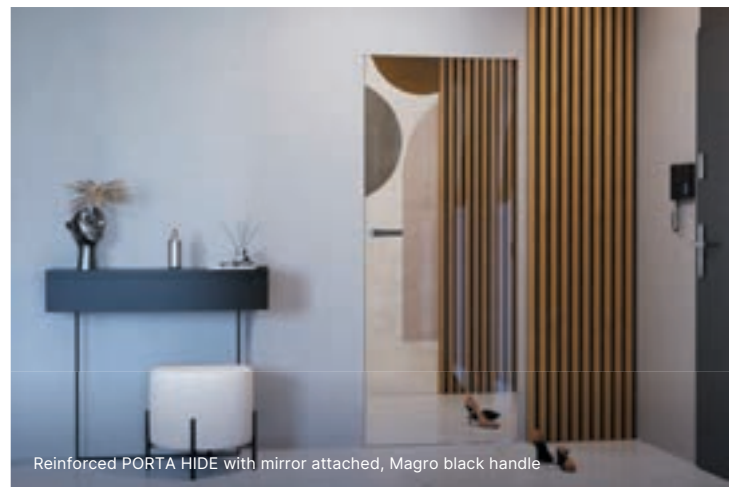

PORTA HIDE with reinforcement, with glued Orac Decor grooved panel, Fioro Gunmetal handle

PORTA HIDE with reinforcement, wall paneling finished with Casella Oak Simplo black handle

PORTA HIDE with reinforcement, with glued Orac Decor grooved panel, Fioro Gunmetal handle

Reinforced PORTA HIDE with mirror attached, Magro black handle

A reinforced door leaf contains 2 straightening rods - so that it maintains its proper plane and does not bend (e.g. after gluing decorative elements). Rods can be adjusted from the top and bottom.

Reinforcement

- Allows for the application of dry and wet decorations on one side of the door.
- Allows applications weighing up to 30 kg to be mounted on the door leaf; the total weight of the door leaf should not exceed 60 kg.
- Comes with high door option - '220'.

Door leaf with reinforcement, option with reverse rebate

The reinforced door leaf with a reverse rebate option allows mirrors, glass panes, laminated boards, or decorative panels with a thickness of up to 18 mm and a weight of up to 30 kg to be attached to the narrower side of the door leaf.

Details

Door leaves are complemented with decorative inlays in silver, golden or black colour, width 6 mm. There is lipping ABS on the side edges of the doors finished with CPL or 3 mm Synchronous Board. PORTA RESIST: The door leaf is finished with a synchronous structure board, and the door frame is finished with a matching 0.2 mm CPL laminate. NATURE LINE: the construction is skinned with a slim particle board which is finished with high quality natural veneer. The door leaf surface is protected by ecological water-based varnishes.

Traditional design.
New interpretation.

Rustic

Rustic is warmth and authenticity inspired by tradition. The division of doors from this line refer to classic, rustic constructions. Patterns with vertical or diagonal planking and elements, resembling wooden beams, dominate.

Vertical accent.
Optical enlargement.

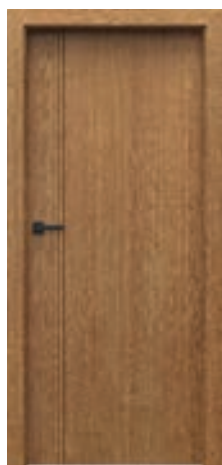

Vertical

Doors with vertical glass that optically enlarges the interior. The design line is also distinguished by the vertical division of the door leaf – most often in the form of a narrow glass pane. The line running along the door handle is a subtle accent that fashions the space.

Folding doors and sliding systems

There are two types of sliding systems:

Pocket system

Door retracts into the wall

Systems: COMPACT
FRAMELESS

On-wall system

The door slides along the wall

Systems: PORTA
BLACK
SLIDE
EFEKT

Discover the advantages of folding doors and sliding doors

- 1** Sliding systems are compatible with all door leaves from PORTA collections.
- 2** They can be installed, for example, between the kitchen and living room, thus **integrating both rooms or dividing them**, depending on your needs.
- 3** They take up less space / **you will save space.**
- 4** They allow more freedom in terms of arranging furniture, tall plants in pots or other decorative elements.

Tip

BUY CONVENIENTLY AS A SET
system + door leaf + door pull
Check on page [190](#)

FRAMELESS sliding system

Detailed offer is also available on www.portadoors.com

How to choose sliding doors?

Possible modifications

- 1 The use of a soft closer – it is a mechanism for silent and gentle closing of the door leaf.
- 2 Choosing a double leaf door with additional synchronized closing system which allows both doors to be moved simultaneously when opening or closing.
- 3 Use of spacers – in chosen wall systems, it is possible to order spacers that allow the door leaf to be moved away from the wall so that it can slide freely along the wall system. This solution is useful when using skirting boards.
- 4 PORTA sliding system without a tunnel – bespoke option; when ordering this system without a tunnel, the entire product (system + sliding door) is modified.
- 5 Door with a mirror – makes the space look bigger and brightens up the interior.

PORTA sliding system with bespoke finish (contract order).

On-wall system

WITH TUNNEL

Option with visible architraves around the door opening (PORTA system).

WITHOUT TUNNEL

Option without architraves consists of a door leaf, upper track or upper system (SYSTEM BLACK, SLIDE, EFEKT).

Pocket system

WITH TUNNEL CONSTRUCTION

Option with visible architraves around the door opening (COMPACT system).

WITHOUT TUNNEL CONSTRUCTION

For concealed option only the door leaf is visible in the entire construction (FRAMELESS system).

What to consider when designing?

- 1 Make sure that the wall on which you are planning to install the sliding door does not have any light switches or sockets. When the door is opened, it may obscure the designed installations.
- 2 Choose the type of sliding system at the design stage – a pocket sliding system requires the installation and reinforcement of a wall to house the metal cassette (pocket).
- 3 Check the mounting holes – they will vary depending on the sliding system you choose.
- 4 The installation of sliding doors is possible after the door opening has been properly prepared (straight wall and level floor).
- 5 For sliding systems, choose a dedicated sliding door leaf. All our interior sliding door leaves are compatible with PORTA and COMPACT systems. If you want to use other door leaves in other systems, they will require additional modifications.

NOTE: it is not possible to make a ventilation undercut in sliding doors.

The choice of sliding system depends on the goal you want to achieve in your interior design.

MINIMALIST EFFECT

We recommend choosing a system without tunnel construction.

DOORS WITH CHARACTER

However, if you want to emphasize the character of the interior, choose a system with distinct accents, such as the BLACK wall-mounted system.

PORTA sliding system

Door frames

- PORTA SYSTEM door frame in the 'tunnel' version.

The set consists of:

- On-wall mounted sliding system (track).
- A door leaf (sliding version).
- A door frame* ('tunnel' version).

* not included in the price

Notes

- National Technical Assessment ITB-KOT-2017/0184 issue 2.
- Set is reversible (left/right). Opening direction can be changed by installing door stop (jamb) on right or left side of PORTA System tunnel.

Accessories included in the price

- A rail with trolleys.
- Strike plate.
- Self-adhesive brush seal.
- Floor mounted, door leaf guiding and stabilizing element.

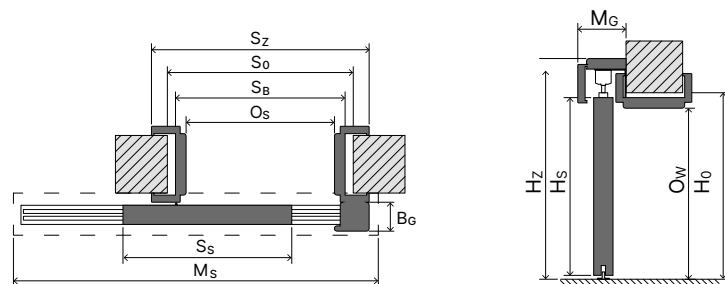

Sliding system PORTA, PORTA CONCEPT, A.9, Grey

Construction

On Wall Sliding system consists of: a rail bar with trolleys, rail cover & door stop. Rail cover and a door stop are made of chipboard and MDF. All sliding version door leaves is compatible with System PORTA.

COMPACT sliding system

Door frames

- Door frames - 'tunnel' option. Available for wall thicknesses: 100 mm, 125 mm and 150 mm.
- 'Tunnel' door frame dedicated for a wall thickness 125 mm is compatible with the PORTA pocket.
- All of the above tunnels are compatible with metal cassettes (pockets) from leading European producers (check S_o/H_o dimensions).

Notes

- Pocket system is dedicated for 125 mm thick plasterboard walls.
- National Technical Assessment ITB-KOT-2017/0184 issue 2.
- It is possible to order additional extensions for symmetrical and unsymmetrical 'tunnel frames' (bespoke order).
- Tunnel 100 mm is available with door leaves without glazing beads/decorative mouldings.

Accessories included in the price

- Metal cassette (pocket) is dedicated to 125 mm thick walls.
- A rail with trolleys and door leaf guiding element, mounted to the floor.
- Hook lock strike plate (optionally at extra charge).
- Anti-dust brush seal, pressed in (tunnels dedicated for a wall 125 mm and 150 mm thick).
- Tunnel dedicated to 125 mm thick walls.

COMPACT sliding system, PORTA CONCEPT A.9, Natural Arles Oak

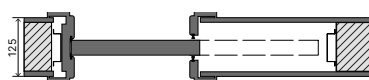

Details

Offered system for a 125 mm thick wall, consists of: a 'tunnel frame' made of chipboard and MDF; galvanized steel cassette with a running track, which are a pocket construction inside the wall.

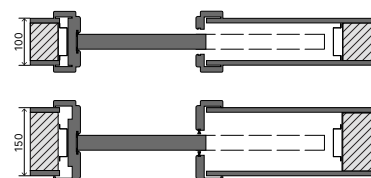

How to open the door

NOTE! Porta Compact tunnel frame is compatible with Porta pockets and pockets of leading European producers. Before installing Compact tunnel frame along with a pocket not produced by PORTA, it is required to check S_o/H_o dimensions.

FRAMELESS sliding system

Framless system construction

- The sliding system is made of aluminium profiles adapted for installation in plasterboard or solid brick walls. Can be used with 40 mm thick door leaves.
- The system is equipped with a full set of accessories and functions allowing precise installation and adjustment of the door leaf (adjustment of the depth of the leaf's recess in the system, adjustment of the leaf's position relative to the frame 1-2 at a height of ± 2.5 mm), as well as a removable stop beam enabling the replacement of the door leaf, a set of seals, guides, and bearing rollers.

Notes

- PN EN 14351-2 standard – door leaf.
- National Technical Assessment ITB-KOT-2020/1281 issue.1 – sliding system.
- System prepared for plasterboard walls with a thickness of 100 mm or 125 mm.

Accessories included in the price

- Metal cassette (pocket).
- Hook lock strike plate (optionally at extra charge).

Details

Plasterboard or hollow chipboard core (optionally at extra charge). The construction is skinned with HDF.

Door frames

What to consider when choosing a door frame?

Choose a function

Concealed:

PORTA HIDE

Design a door according to your own idea! Paint, wallpaper, and decorate however you like.

For more information go to page [80](#)

Waterproof:

HYDRO PROTECT™ STEEL DOOR FRAMES

For more information go to page [207](#)

Choose type

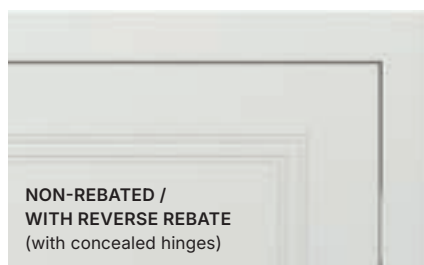

Non-rebated door frames are designed to conceal the hinges when the door is closed.

It gives the impression that the door leaf is perfectly connected to the door frame and forms a uniform surface with it.

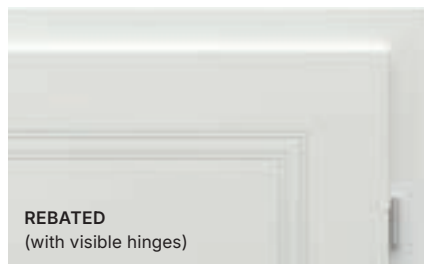

Rebated door frames have a traditional construction.

The rebated door frame connects to the door leaf in such a way that the meeting edge type of the door leaf slightly overlaps the meeting edge type of the door frame.

For more information go to page [208](#)

Stylized crown and pilasters for installation with a door frame. More on page [210](#)

SKIRTING BOARD

Elegant and practical way to finish your interior. More on page [231](#)

What to consider when choosing a door frame?

Choose a function

Choose a waterproof door frame that guarantees durability and reliability for many years to come.

Steel door frame with many advantages

Steel door frames are the ideal choice for the most demanding spaces, both in terms of durability and attractiveness. Thanks to their versatility, they can be used in both new and older buildings that require thoughtful renovation, giving them a unique style and design. A wide range of modifications and bespoke options, including any RAL or NCS colour, opens up many possibilities.

No visible joints

Steel door frames are welded at the joints and then powder paint coated with Premium Polyester Paint. This makes the corner line invisible and very durable at the same time.

High durability

The precision of workmanship and the materials used in production guarantee long-lasting quality. Thanks to their high resistance to mechanical damage and corrosion, they will be a great investment for years to come. They are particularly suitable for use in the bathroom or kitchen, i.e. rooms where humidity is usually high.

Humidity resistant

Steel door frames are made of galvanized steel sheet and additionally protected with a passivation layer during the surface preparation process. Next, a layer of polyester powder paint is applied. All this increases corrosion resistance for many years and protects door frames from water, e.g. when washing floors.

**100%
WATERPROOF**

**DOOR FRAME
HYDRO PROTECT™**

**No more swollen
door frames in wet
rooms!**

**A new
dimension of
durability**

Exceptional moisture humidity
and warp, ideal for bathrooms,
kitchens, or laundry rooms.

Non-rebated door frames in the PORTA offer:

- PORTA SYSTEM ELEGANCE **HYDRO PROTECT™**
- PORTA SYSTEM ELEGANCE
- PORTA SYSTEM ELEGANCE 90°
- Steel PORTA SYSTEM ELEGANCE
- LEVEL

Door frames

with upper panel

- 1

The surface of the door leaf is even with the door frame.
- 2

Concealed hinges.
- 3

A door leaf without a rebate is made without a notch, the so-called rebate.
- 4

Upper panel , thanks to which you can optically lengthen the door.

REBATE AT AN EVEN LEVEL
WITH A DOOR FRAME

CONCEALED 3D HINGE

Tip

THE UPPER PANEL IS
AVAILABLE IN TWO
HEIGHTS:
20 cm and 100 cm, with
the option of shortening
to the desired height.

Top view

Door frames with upper panels in the PORTA offer:

- LEVEL

Door frames with reverse rebate

- 1 The surface of the door leaf is even with the door frame.
- 2 Concealed hinges.
- 3 A door leaf with a reverse rebate opens inwards, while maintaining the aesthetic effect of a flush surface on the outside.

REBATE AT AN EVEN LEVEL
WITH A DOOR FRAME

CONCEALED 3D HINGE

Tip

When designing the interior and during the installation, pay attention to **THE LOCATION OF THE FLOOR JOINT** – it should be directly under the door leaf.

No. B.BK.60111.808.2024

220 60 mm 80 mm

Adjustment Rebated Non-rebated

Construction

The door frame consists of:

- A door frame head and two jambs, made of wood-polymer composite. It comes with hardware and accessories.
- Architraves (rebated option: 60, 80 mm, non-rebated option: 80 mm) made of wood-polymer composite.

Door frame is produced and delivered to client as a set of elements to assemble on site.

Notes

- PN-EN 14351-2 standard.
- Door frame should be installed on finished walls (e.g. wall papers) and on a finished floor (e.g. floor panels).
- Size '100' requires third hinge.
- Height '220': 3 hinges as standard.

PORTA SYSTEM HYDRO PROTECT™, PORTA SYSTEM ELEGANCE HYDRO PROTECT™

PORTA RENOVA

Notes

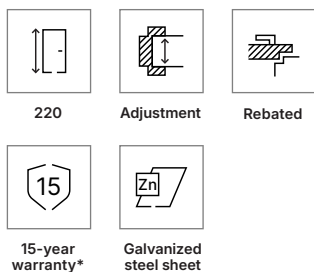

- PN-EN 14351-2:2018-2 (only for the door set: RENOVA door frame and PORTA interior door leaf).
- Door frame should be installed on finished walls (e.g. wall papers) and on a finished floor (e.g. floor panels).
- The frame can also be ordered as the 'tunnel' option (i.e. made without the rebate, seal, hinges and lock catch).
- Door frame not available in the following colours: Cashmere, Fjord, Olive.
- Size '100' requires third hinge.
- You can order additional broadening (head and jambs).
- Standard door leaves can be used with this door frame. In the case of installing a handle with an escutcheon wider than 44 mm, a dedicated door leaf with a 72/60 mm lock should be ordered.
- All crooks and unevenness of a wall and old door frame have to be taken into consideration during wall opening measurement.

Due to the complicated installation, it is recommended to use the services of an Authorized Installation Group.

Key to dimensions ➔ 267

Detailed offer is also available on www.portadoors.com

Steel PORTA SYSTEM

Construction

This adjustable door frame is made out of the best quality galvanized steel, 1,2 mm thick.

The door frame consists of:

- Fixed part (fitted to the wall thickness) mounted on a wall (with necessary accessories).
- Adjustable part, wrapping the wall -5, +20 mm.
- Rubber seal set circumferentially.
- Barrel hinges.

Door frame size

- '60', '70', '80', '90', '100' and '120' ÷ '200'
- To be installed on the finished floor '0'.

Accessories - included in the price of the door frame

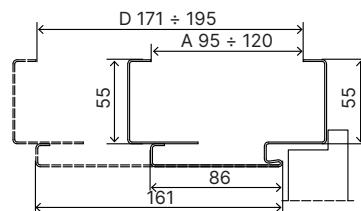

- Two or three standard barrel hinges.
- Three hinges (in the door frame with dimension '100').
- Rubber seal set circumferentially, white, grey, brown, cream, anthracite, black.
- Fixed part mounted on a wall.
- Reinforcement for the lock strike.

* For the door frame construction and coating.

Door frame extensions

Tip

If you need a door frame for a wider wall, you go for additional solutions: a tunnel extension or an adjustment panel. And if you are looking for bigger adjustment than the standard (up to 20 mm), use the so-called "wide tongue," which increases the adjustment range to 40 mm.

Door frame adjustment

The door frame can be widened to fit the range of the wall by:

Tunnel extension (combined door frame)

Designed for large wall ranges (max. 588 mm). The solution consists of a standard door frame and an additional widening beam with a connector. Check the dimensions in the table on page 267

Adjustment Panel

A solution that allows the standard door frame (max. 460 mm) to be widened with an additional MDF panel; adjustment panels are available in widths of 80 and 160 mm.

Door ventilation ensures free air flow between rooms separated by doors.

We recommend ventilation especially for bathrooms, because most of them do not have access to a window, and in such a case ventilation is mandatory and specified in the building law - the total area of ventilation openings in accordance with PN-B-03430:1983 (PN-83/B-03430) should be at least 220 cm². Door with a width of '80' meets this requirement.

Types of ventilation

ventilation undercut

- This is a specially cut-out section in the lower part of the door leaf in the shape of a trapezoid – it allows air to flow freely between rooms, ensuring proper circulation.
- The ventilation undercut in the PORTA range is protected with a colourless AQUA STOP varnish made using technoPORTA technology, which protects the door leaf from humidity.
- The height of the ventilation undercut is 36 mm (add 8-12 mm for the installation gap, i.e., the distance between the lower meeting edge type of the leaf and the ground).

Recuperation shortcut

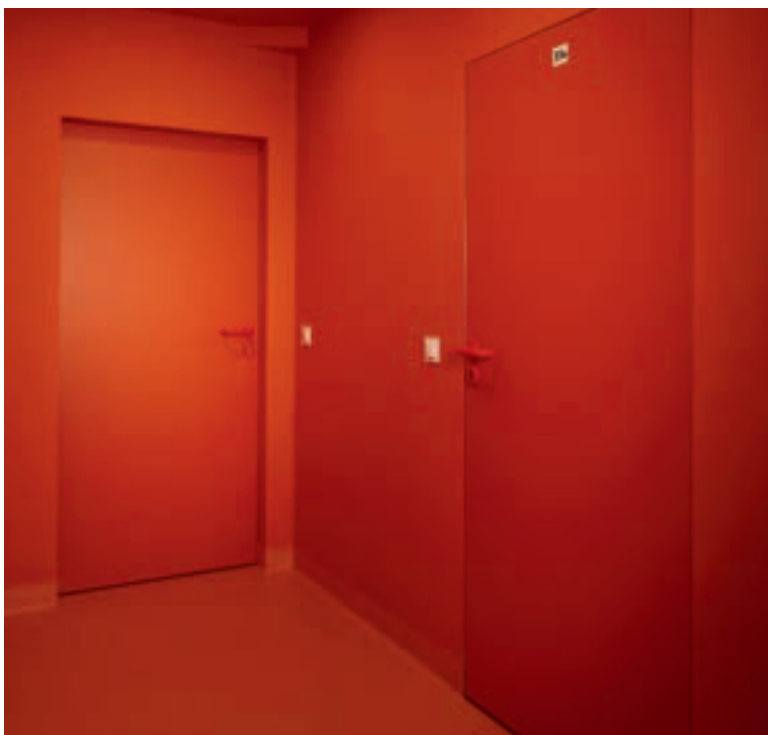

- This is a special cutout in the lower part of the door leaf, allowing air to flow freely. It is ideal for energy-efficient buildings, as it enables efficient use of heat. With natural ventilation or traditional ventilation systems, heat would escape outside.
- Before using a recuperation shortcut, make sure you can use it in the room you are designing.
- This is a good alternative to ventilation undercut – we recommend it to those who want the most minimalist ventilation solution possible.
- The height of the recuperation shortcut is 15 mm (add 8-12 mm for the installation gap, i.e., the distance from the lower edge type of the door leaf to the ground).
- Available only for the Polish norm.

Durability
you can rely on

Are you looking for a doorto the garage?

Discover our collections and choose something for yourself.

1. Matching the interior

AIR

WATER

PORTA HIDE

ADDITIONAL OPTION

Additionally, you can choose PORTA HIDE doors with reinforcement and a threshold 'drop' seal. The door leaf contains two straightening rods so that it maintains its proper plane and does not bend. The rods can be adjusted from the top and bottom.

Garage door package

Construction consists of a layer of aluminium sheet, chipboard core and automatic threshold 'drop' seal. Thanks to this, we have achieved resistance to the adverse effects of temperature differences and air humidity typical of the transition between the garage and the house.

Package available for collections*:

AIR	PORTA VIGO	PORTA DESIRE
FIRE	PORTA LINE	PORTA HIDE
WATER	PORTA CPL	PORTA FACTOR
PORTA RESIST	PORTA DECOR	NATURE CLASSIC
PORTA LOFT	PORTA VECTOR	NATURE VERDINO
PORTA LEVEL	PORTA ART DECO	EARTH
PORTA LEVEL LINE	PORTA OSLO	NATURE LINE

* Garage package not available in Soft CPL and synthetic. veneers from g 1 : UNI and Catania Oak

2. Reinforced

AGATE DOOR

AGAT reinforced doors with threshold 'drop' seal ensure tightness and resistance to adverse temperature differences. A strong steel door frame and bolt locks guarantee durability and reliable use.

3. Economical

STEEL BASIC,
STEEL SOLID

Steel BASIC and Steel SOLID doors are a practical, economical solution. Made of durable galvanized steel sheet resistant to corrosion and with the option of using a core of expanded polystyrene or mineral wool, which provides better thermal and acoustic insulation.

For more information, see the Entrance and Function Doors Catalogue or contact your dealer.

Total customization and perfect results

Please note

PANEL GLASS

The glass panel is reinforced around the perimeter with thermosetting paint, which increases resistance to mechanical damage and also reduces the risk of glass cracks due to weather conditions.

RC2 class in OPTIMUM, OPTIMUM ENERGY, PREMIUM ENERGY packages: • at no extra charge - all MODERN models, LINE, C.1, C.2 CLASSIC models and R.1, R.2, R.3, R.4 RETRO models • with extra charge of 340 | 418.20 - all GLASS and PANEL GLASS models • not available in models: C.3, C.4 CLASSIC and R.5, R.6 RETRO

Detailed offer is also available on www.portadoors.com

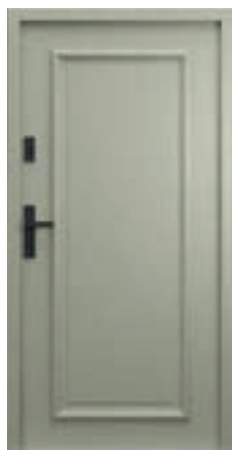

PORTA THERMO EXTERIOR STEEL DOORS

The base price of the model includes

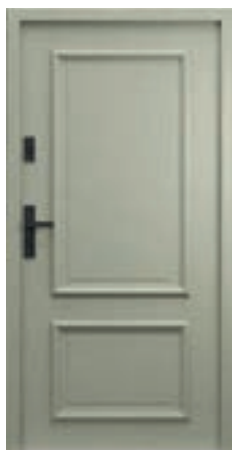

DOORS: finished with laminated steel sheet (door leaf width '80' – '100' + door frame with threshold), equipped with a multipoint lock with hooks, adjustable strike plates, dog bolts, and adjustable 3D hinges with caps.

SILVER ACCESSORIES (Inox): Gardo handle with upper escutcheon, set of class B inserts (model M.3 with pull handle – door handle not available).

Finishes

Maja Ganszyniec

Product and furniture designer, known for her holistic and responsible approach to design. Her design studio explores how design can combine beauty, functionality, and sustainability. Her clients are IKEA, DUKA, and BMW, among others.

When I started working with PORTA, we set ourselves a clear goal: to organize the offer so that it was consistent and intuitive to understand. The new system is based on two main criteria – style and price – making the selection process simple and straightforward, and giving the entire range a clear, consistent structure.

Together with Maja Ganszyniec, we achieved our goal. Transparency and orderliness of the offer have become the foundation of PORTA's new philosophy for the CMF (colour-material-finish) area. The entire process of choosing a door has been designed to facilitate decision-making and support the user at every stage.

The range of finishes is divided into Uni Colours and three distinctly different lines of wood-inspired veneers, allowing them to be quickly matched to the character of the interior:

Modern – elegant wood-effect veneers with a calm pattern and even dyeing.

Traditional – natural look veneers with a distinct pattern, small knots, and subtle contrast,

Rustic – distinctive, rustic veneers with rich graining and visible colour variations.

We have also introduced clear price brackets that allows you to compare available finishes – paint, synthetic veneer and natural veneer. This makes it easy to find an option that harmoniously combines visual qualities with your budget.

PORTA's new approach follows the idea of understandable and functional design – it creates a system that not only organizes the offer, but also inspires.

Uni Colour

Scan QR code
and discover
our colours

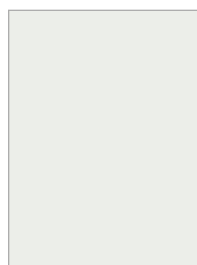

Subdued, uniform, and calm colours. It provides a neutral base; doors with this finish do not attract attention but blend harmoniously into the interior.

Uni Colours can be used in any interior; they are timeless and versatile. They go well with various materials, such as wood, stone, or metal.

The RAL and NCS equivalents provided may differ slightly from the samples. This is especially applies to dark colours, where different gloss parameters can significantly change the colour perception. We recommend to compare it to the actual sample.

Due to technology and use of various materials for door frames and door leaves, there might appear slight difference between them.

Modern

Elegant, natural wood with a regular, linear graining (striped and semi-fladder). It is characterized by even dyeing and the absence of knots.

Modern interiors: new buildings, contemporary housing estates in the city, and new modernist houses.

NATURAL VENEER

Natural veneer is a thin layer of real wood, each door leaf has a unique grain pattern. No two doors are alike, which adds nobility and authenticity to the interior.

Doors with natural veneer are suitable for both classic and modern interiors with an elegant character.

Natural Veneer UNI

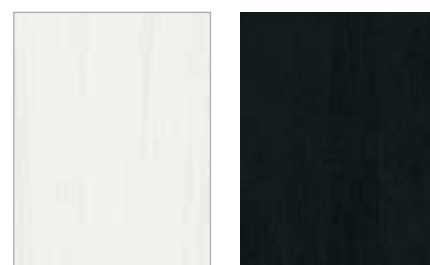

COLOURS MARKING:

B, M, N – striped veneer

E, F, K – veneer, 'fladder' version

The veneer graining is obtained through the proper selection of wood and the appropriate processing of the veneer leaves and the technique of folding them. Due to the characteristic of natural veneers, differences in colour and graining, might appear on a door leaf.

These differences cannot be grounds for accepting a complaint.

Powder paints

Powder coating creates a very hard and durable coating. These doors are resistant to scratches, impacts, and heavy use.

The combination of powder paint coated elements with large glazing brightens and visually enlarges the interior. Perfect for apartments and offices.

Technical drawings

Retro module (with PORTA SYSTEM door frame)

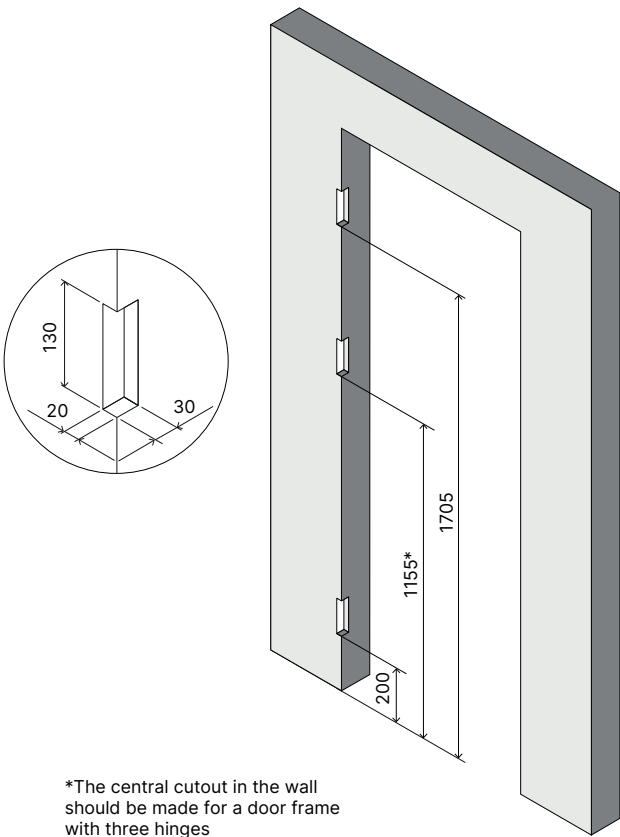

Preparing the opening for the installation of a steel door frame

ATTENTION: in the case of steel door frames, for the dimensions of wall openings given in the tables, it may be necessary to make small spot chisels on the wall edges in places where the internal elements of the door frames protrude.

Preparing the opening for the installation of a non-rebated door frame.

Other door dimension tables

If you are looking for technical door dimensions, you will find them in dedicated catalogues (check the inside back cover of the catalogue).

To obtain the S_o dimension for a double leaf door, you must:

- for rebated door leaves with Porta SYSTEM frame: to the S_o dimension given in Table 1 for a single (rebated) door leaf, add the S_s dimension of the second (rebated) door leaf or the side panel (rebated).
- For rebated door leaves with other types of door frames: To the S_o dimension specified in Table 1 for a single (rebated) door leaf, add the S_s dimension of the second (rebated) door leaf or the (rebated) side panel, and then subtract 10 mm from the resulting value.
- For non-rebated door leaves: To the S_o dimension specified in Table 1 for a single (non-rebated) door leaf, add the S_s dimension of the second (non-rebated) door leaf or the (non-rebated) side panel, increased by 16 mm.

Enlarging the adjustment range of adjustable door frame with a tunnel.

H_o	Height of the wall opening prepared for embedding the frame
S_b	door frame width without architraves
H_b	door frame height, dimension without architraves
S_z	total door frame width with architraves
H_z	total height of door frame, including architraves

Notes

- Dimension tolerance according to PN: up to 1 m: ±1 mm, above 1 m: ±2 mm - applies to width and height dimensions.
- Side door panels for rebated door sets are available in Natural veneer in size '40'; S_s = 444, H_s = 2030.
- Door frames are designed to be installed on finished floor level. For steel door frames there is a possibility to order them in lengthen option + 30 mm (to be mounted underfloor level). In this case sizes H_b and H_z are enlarged by 30 mm (level -30).
- The dimension provided in the table for interior door leaves applies to both rebated and sliding doors.
- PORTA SYSTEM integrated with upper transom, dimension H_{ov} , H_{br} and H_z + 302 mm.

* dimensions for standard height, when the door height is changed, the dimensions NH, Now for the side transom are adjusted accordingly NH dimensions, Now increase by 3 mm in the case of a side transom in and doors equipped with a concealed door closer.

- A** Adjustment of transom width in the range of NS 954 - 2754 mm
- B** Adjustment of transom height within the NH range of 300-500 mm (every 10 mm).
- C** Adjustment of the side transom height within the Hz range of 2015-2385 mm (every 10 mm).
- D** Adjustment of door height - every 10 mm, within the range: standard $H_z = 2010 - 2380$ mm
optimum $H_z = 2015 - 2385$ mm
premium $H_z = 2015 - 2385$ mm
- Door width adjustment - every 10 mm, within the range:
Standard $S_z = 930-1130$ mm
Optimum $S_z = 954-1154$ mm
Premium $S_z = 954-1154$ mm
- E** Adjustment of the side transom width within the range NS 300 - 800 mm (every 10 mm)

Key to dimensions

- S_s total width of the door leaf (including the rebates)
- H_s total height of the door leaf (including the rebate)
- D_s door leaf thickness
- S_o width of the wall opening prepared for embedding the frame
- H_o height of the wall opening prepared for embedding the frame, measured from the level of the finished floor
- O_s opening width
- O_w height of the opening after door frame installation (measured from finished floor level)
- S_z total door frame width with architraves
- H_z total height of door frame, including architraves
- T_{sw} permissible tolerance of deviation in width | height of wall opening
- NS** total width of the transom
- NH** total height of the transom
- Nos** visible width of glazing
- Now** visible height of glazing

** Outer dimensions (on the narrower side of the door leaf) SZ and HZ are identical to the dimensions of doors with PORTA SYSTEM ELEGANCE door frames.

*** S_o / H_o width/height of clear opening of old steel frame. TS/W - tolerance +15 mm depends on a construction of the old door frame.

NOTE: The dimensions S_z and H_z for frames with natural veneer are provided with a tolerance of -1 mm / +3 mm.

NOTE: For doors with a height of '210', the dimensions: H_s, H_o, O_w, H_B should be increased by 132 mm.

** When using the PROJEKT (BIS and Premium) door frame, the wall opening S_o should be increased by 30 mm and the height H_o by 15 mm (tolerance ±10 mm / ±5 mm).

NOTE: in the case of steel door frames, for the dimensions of wall openings given in the tables, it may be necessary to make small spot chisels on the wall edges in places where the internal elements of the door frames protrude - see the drawing on page

WATERPROOF

DOOR FRAME
HYDRO PROTECT™

FUNCTION
+ DESIGN

No more swollen door frames in wet rooms!

HYDRO PROTECT™ The new generation of PORTA SYSTEM door frames, made of wood-polymer composite, which allows you to feel comfortable and safe in the kitchen, bathroom, laundry room, and anywhere else where surfaces are particularly exposed to humidity. Enjoy life and peace of mind – the HYDRO PROTECT™ door frame is 100% waterproof. Discover the new quality of door frames on pages 8-9, 209, 214-215 or look for the Hydro Protect™ icon next to products in the catalogue.
